THE VALUE OF PROPER GEAR...

Like any other firearm owner I had a stash of holsters. I can't say that I was completely satisfied with what I had at the time, so I started doing my research and making my own holsters.

I started BattleGear in 2015. A friend referred a friend who in turn referred another friend to the point where I am today. Blessed enough to say my hobby has become my business. I pride myself in saying I have carried and tested every design before producing to the public. By working with hundreds of customers I am confident to say BattleGear holsters are top quality products!

BattleGear Holsters provides high quality custom made kydex holsters for firearms. We also make kydex mag carriers, knife sheaths, everyday carry wallets and other kydex accessories.

Our key focus is placed on concealment, reliability, durability, comfort and affordability.

Description & Terminology

Cadet Wallet

BattleGear's trainee wallet. The perfect EDC wallet. Takes up to 10 cards, not suitable for cash.

UruKhai Wallet

Minimalist EDC wallet. Perfect for daily use. Take up to 12 cards, but are adjustable, so less cards won't be a problem. Suitable to carry cash too.

IWB holsters

INNER-WAISTBAND HOLSTERS are used for concealment of a firearm as it is hidden under your shirt. IWB holsters can be carried on your hip, referred to as strong-side, or in front in the appendix position.

BATTLEGEAR OFFER 2X CLIP OPTIONS FOR IWB HOLSTERS:

QUICK-CLIP

- This clip is also known as the "FOMI" clip.
- This clip is not tuck-able, therefore it is the ideal option for people wearing T-shirts or un-tucked shirts daily.
- The clip easily slips over the belt with a hook at the bottom which secures the holster.
- This clip is available in durable Nylon-plastic and steel.

J-CLIP

- J-Clips are ideal for people who dress semi-formal to casual and don't mind the clip showing.
- J-clips are tuck-able clips used for IWB holsters.
- They are strong clips which work well with an EDC Belt. The clip hooks up the bottom of the belt, preventing the holster from drawing out with the firearm.

IWB LIGHT-BEARING HOLSTERS (WML)

also have the option of either a quick-clip or a J-clip.

BattleGear's speciality holster, the reverse retention holster is specifically designed for light-bearing firearms carried in the appendix position. This holster takes a J-clip, a built-in claw, wedge and the reverse retention function which all adds to better concealment and comfort when carrying.

IWB MAG CARRIERS

also have the option of either a quick-clip or a J-clip.

OWB Holsters

OUTER-WAISTBAND HOLSTERS are carried outside of your pants and in the strong-side position. These holsters have good retention due to the firearm being carried openly and not being covered by clothes etc. as well.

BattleGear offer the following clip options for OWB holsters:

BELT LOOP

- These clips are Nylon infused plastic which makes them extremely durable and nearly unbreakable. Holsters with beltloops are secure on your belt as the holster is molded with a bend to fit your body and the loops sit tight on your belt as well.

PADDLE

- Paddle-holsters are convenient to use, because the paddle simply slide inside your pants with the holster outside your waistline. If it is uncomfortable in a certain position you can easily correct the holster.
- The Paddle has aggressive hooks which keeps the holster in place.

TEK - LOK CLIP

- The TEK-LOK clip is also known as the Battle/combat-clip.
- This clip is extremely versatile. It can be used for most holsters or knife sheaths.
- This clip is rigid, durable, easy to attach and easy to remove.
- TEK-LOK clips have a secondary locking system which provides for added security for your holster to remain in place.

OWB light-bearing holsters can be made with any of the OWB clips.

OWB mag carriers are made with beltloops.

BattleGear makes customized knife sheaths and other EDC gear on request.
